PHASE 1 · 重装系统

LESSON 02

# 时态系统

## 别怕，你只需要掌握 6 个

Code to Career · IT 职场英语实战课

# 🎧 听力热身：听一段真实 Standup

**Dev:** Hey everyone. So yesterday I **finished** the user authentication module and **pushed** it to staging. Today I'**m working on** the password reset flow. I'**ll** probably start writing tests this afternoon. One thing though — I **was looking into** the email service integration when I **noticed** our API key **has expired**, so I'm blocked on that until DevOps renews it.

🎯 这段话里出现了几种时态？分别是哪些？

# 为什么你不需要学 16 个时态

JavaScript 有几十个数组方法，但你日常写代码：

`map` · `filter` · `forEach` · `reduce` · `find` · `push`

就覆盖了 90% 的场景。时态也一样。

**6**

个时态，够用了

# 时态 = 动词的执行状态

| 执行状态 | 含义 | 对应时态 |
| --- | --- | --- |
| CONSTANT | 本职工作 / 不变的事实 | **一般现在时** |
| RUNNING | 正在执行中 | **现在进行时** |
| RESOLVED (log) | 执行完了，记录结果 | **一般过去时** |
| RESOLVED (state) | 执行完了，状态已变更 | **现在完成时** |
| SCHEDULED | 已排期，等待执行 | **一般将来时** |
| WAS_RUNNING | 当时正在跑的后台线程 | **过去进行时** |

# 1 一般现在时 — 声明常量

**主语 + 动词原形（第三人称加 -s）**

- I **maintain** the backend services. 我负责后端服务
- She **leads** the frontend team. 她带前端团队
- Our API **handles** 10,000 requests per second. 我们的 API 处理 1 万 QPS
- We **deploy** every two weeks. 我们每两周部署一次

> ⚠ **踩坑提醒**
> 第三人称的 -s 是最容易漏的。 he/she/it 后面的动词要加 -s ，就像 TypeScript 的类型检查——不加也能跑，但不规范。

# 2 现在进行时 — 正在运行的进程

**主语 + am / is / are + doing**

- I'**m working on** the API integration. 我正在做 API 对接
- We'**re migrating** to the new database. 我们正在迁移数据库
- The team **is testing** the new feature. 团队正在测试新功能

> 💡 **核心场景**
> Daily standup 里「I'm working on...」是最万能的句型。如果只记一个，就记这个。

# 3 一般过去时 — 已经 return 的结果

**主语 + 动词过去式**

- I **fixed** the login bug **yesterday**. 我昨天修了登录的 bug
- We **released** v2.0 **last Friday**. 我们上周五发布了 2.0
- The client **approved** the design **this morning**. 客户今早批准了设计稿

> 💡 **关键信号词**
> **yesterday · last week · this morning · two days ago**
> 句子里有明确的过去时间点 → 用一般过去时

# 4 现在完成时 — 持久化的状态变更

**主语 + have / has + done （过去分词）**

- I**'ve deployed** 3 microservices this quarter. 强调成果
- We**'ve completed** the migration. 强调「搞定了」
- She **has fixed** the issue. 强调「现在没问题了」

🧠 **核心理解**

**现在完成时 = 用过去的行为描述当前的状态**

**have** （现在） + **done** （过去的动作）

# ⇄

# ⚡ 重点辨析

## 一般过去时 vs 现在完成时

叙述事件 vs 描述当前状态

# 类比 1： git log vs Jira 状态

### 一般过去时 = 写 git log

```
commit: fixed payment bug
date: 2024-01-15 15:00
```

记录「发生了什么事件」

*I fixed the payment bug yesterday.*

### 现在完成时 = 改 Jira 状态

**In Progress → Done**

更新「当前状态」

*I've fixed the payment bug.*

同一件事，不同的视角：一个记录历史，一个更新状态

# 类比 2： dispatch(action) vs getState()

**过去时 = dispatch(action)**

```
{ type: 'FIX_BUG',
  timestamp: 'yesterday' }
```

→ 记录事件（关心「发生了什么」）

**完成时 = getState()**

```
{ bugStatus: 'fixed' }
```

→ 查看当前状态
（由过去的 action 产生，
但关心的是现在的值）

# 实战场景对比

PM 问：
「**What did you do yesterday?**」
→ 问事件

*"I fixed the payment bug."*

PM 问：
「**What's the status of that bug?**」
→ 问状态

*"I've fixed it."*

💡 **判断法：问自己想强调什么**
**什么时候做的？做了什么？** → 一般过去时
**现在是什么状态？有什么成果？** → 现在完成时

# 硬规则（不需要语感也能用）

🚫 **句子里有具体过去时间点**
**→ 只能用一般过去时，不能用现在完成时**

```
I fixed it yesterday.     ✅
I've fixed it yesterday.  ❌
```

反过来，现在完成时搭配不指定具体时间的词：
**already · yet · just · so far · this quarter**

# 更多对比

| 一般过去时（叙述事件） | 现在完成时（描述当前状态） |
| --- | --- |
| We launched the product in March. | We've launched the product.<br>= 产品现在是上线状态 |
| I learned React last year. | I've learned React.<br>= 我现在会 React |
| The server crashed at 3am. | The server has crashed.<br>= 服务器现在是挂的 |

# 5 一般将来时 — 已排期的任务

**主语 + will + 动词原形 / 主语 + be going to + 动词原形**

- I'**ll start** working on the search feature. 我会开始做搜索功能
- We'**re going to** refactor the auth module next sprint. 下个 sprint 要重构认证模块
- The fix **will be** deployed by end of day. 修复会在今天结束前部署

> 💡 **will vs be going to**
> will 更像临时决定 / 承诺， be going to 更像已经计划好的事。职场沟通中两者混用没问题。

# 6 过去进行时 — 后台运行的线程

**主语 + was / were + doing**

- I **was debugging** the API **when** the server went down.
- We **were discussing** the design **when** the client called.
- She **was reviewing** the PR **when** she found the security issue.

> 💡 **关键特征**
> 几乎总是和 when 连用：「我正在 A，这时 B 发生了」

# 否定与提问：变形速查

| 时态 | 否定形式 | 疑问形式 |
| --- | --- | --- |
| **一般现在** | I don't know.<br>He doesn't work here. | Do you know?<br>Does it work? |
| **现在进行** | I'm not working on it. | Are you working on it? |
| **一般过去** | I didn't finish it. | Did you finish it? |
| **现在完成** | I haven't finished yet. | Have you finished? |
| **一般将来** | I won't be able to. | Will you finish today? |
| **过去进行** | I wasn't working on it. | Were you working on it? |

🚨 **核心规则： did / didn't 后面动词回原形！**

`Did you fixed it? ❌ → Did you fix it? ✅`

# IT 高频不规则动词

| 原形 | 过去式 | 过去分词 | 原形 | 过去式 | 过去分词 |
|---|---|---|---|---|---|
| build | built | built | go | went | gone |
| write | wrote | written | know | knew | known |
| run | ran | run | see | saw | seen |
| send | sent | sent | think | thought | thought |
| find | found | found | make | made | made |
| choose | chose | chosen | get | got | got(ten) |
| break | broke | broken | set / put | set / put | set / put |
| give | gave | given | begin | began | begun |
| take | took | taken | tell / meet | told / met | told / met |

💡 **好消息：** deploy, merge, push, test, review, fix, release, update 都是规则的（加 -ed 就行）

# 时态速查表 Cheat Sheet

| 时态 | 公式 | 用于 | Standup 例句 |
|---|---|---|---|
| **一般现在** | `do / does` | 职责、系统行为 | *"I handle deployment."* |
| **现在进行** | `am/is/are doing` | 正在做的事 | *"I'm working on the API."* |
| **一般过去** | `did` | 昨天做了什么 | *"I fixed the bug yesterday."* |
| **现在完成** | `have/has done` | 成果、状态变更 | *"I've finished the migration."* |
| **一般将来** | `will do / going to` | 接下来的计划 | *"I'll start the testing today."* |
| **过去进行** | `was/were doing` | 解释当时背景 | *"I was debugging when..."* |

# 纠错练习：找出时态错误

1. Yesterday I **have fixed** the login bug.

2. Right now I **work** on the dashboard API.

3. Tomorrow I **was going to** write unit tests.

4. I **didn't finished** the code review yet.

5. The server **is crashing** at 3am last night.

6. **Does** you merged the branch already?

📝 找出每句话的时态错误，并说出正确答案

# 课堂练习：模拟 Standup

## 📋 你的 Task Board

| | |
|---|---|
| ✅ DONE | Fix login page CSS issue (completed yesterday) |
| 🔄 IN PROGRESS | Build user dashboard API |
| 📋 TODO | Write unit tests for payment module |
| ⚠️ BLOCKED | Waiting for design team's feedback on new layout |

```
模板: Yesterday I ___. Today I'm ___. I'll ___. One blocker: ___.
```

💬 试着用英文完成一次完整的 Standup 汇报

# 进阶： PM 追问，你怎么答？

| PM 的问题 | 你的回答 | 时态 |
| --- | --- | --- |
| *When did you start?* | I started on it Monday. | **一般过去** |
| *Is the fix deployed?* | I've deployed it already. | **现在完成** |
| *What are you doing about it?* | I'm pinging the team now. | **现在进行** |
| *Will you finish today?* | I won't be able to. | **将来时否定** |
| *What happened last night?* | I was running the script when CI failed. | **过去进行 + 过去** |
| *How many PRs this sprint?* | We've completed 12 so far. | **现在完成** |

🎭 角色扮演：老师当 PM 随机追问，学生用正确的时态回答

# 课后作业

## 作业一：每日虚拟 Standup （持续一周）

`Yesterday I ___. Today I'm ___. I'll ___. Blocker: ___.`

- 描述真实在做的工作
- 每条至少 3 种不同时态
- 尝试使用一次否定形式（haven't / didn't / won't）
- 不要求完美，重点是持续输出

## 作业二：纠错挑战

1. I have completed the feature last sprint and now I work on the next one.
2. The team didn't deployed the fix yet because QA is still testing it yesterday.
3. When the client is calling us, we have discussed the architecture changes.

# 本课词汇对照表（1/2）职场高频动词

| 英文 | 中文 | 英文 | 中文 |
| --- | --- | --- | --- |
| maintain | 维护 | deploy | 部署 |
| release | 发布 | merge | 合并分支 |
| push | 推送代码 | fix | 修复 |
| refactor | 重构 | migrate | 迁移 |
| debug | 调试 | review | 审查 / 评审 |
| test | 测试 | approve | 批准 |
| handle | 处理 | identify | 定位 / 识别 |
| expire | 过期 | renew | 续期 / 更新 |

# 本课词汇对照表（2/2） Standup / 会议常用

| 英文 | 中文 | 英文 | 中文 |
| --- | --- | --- | --- |
| standup | 每日站会 | blocker | 阻碍 / 卡点 |
| in progress | 进行中 | done / completed | 已完成 |
| backlog | 待办 / 需求池 | ETA | 预计完成时间 |
| hotfix | 紧急修复 | staging | 预发布环境 |
| production / prod | 生产环境 | sprint | 迭代周期 |
| PR (Pull Request) | 代码合并请求 | CI pipeline | 持续集成流水线 |
| root cause | 根本原因 | EOD (end of day) | 今天下班前 |
| so far | 到目前为止 | already / yet | 已经 / 还（没） |

# 本课核心要点

1. IT 职场日常沟通只需要 6 个时态
2. 时态 = 动词的执行状态
3. 过去时叙述事件，完成时描述当前状态
4. 有具体过去时间 → 只能用一般过去时
5. did/didn't 后面动词要回原形
6. Standup 是最佳练习场
